ENS Report

 [report.md](#)

At the request of Dean Eigenmann, I reviewed the following contracts in the upcoming ENS migration:

- ENSRegistry.sol
- ENSRegistryWithFallback.sol

No problems were found in the `ENSRegistry.sol` contract, and one mistake was found and fixed in `ENSRegistryWithFallback.sol`.

```
function _setOwner(bytes32 node, address owner) internal {  
    address addr = owner;  
    if (addr == address(0x0)) {  
        addr = address(this);  
    }  
  
    super._setOwner(node, owner);  
    // ^--- should be addr  
}
```

To the best of my knowledge, the remainder of the contracts work as intended.

```
function _setOwner(bytes32 node, address owner) internal {  
    address addr = 0x000000000000C2E074eC69A0dFb2997BA6C7d2e1e  
    if (addr == address(0x0)) {  
        addr = address(this);  
    }  
  
    super._setOwner(node, owner);  
    // ^--- should be addr  
}
```
